Hello,

The first part in the recruiting process is to develop a little project to show us your coding skills.

Project specifications:

You will create a GitHub repositories search page using their API.

Preferred Technologies: AngularJS/React, [MVC.NET](#), Bootstrap

- 1.The user will type the repository he would like to search.
- 2.When searching(by pressing a button or using the Enter key) you will perform a request to:
https://api.github.com/search/repositories?q=YOUR_SEARCH_KEYWORD
- 3.Render the results as gallery items where each item will show to repository name, avatar of the owner and a **bookmark**
- 4.When a user will bookmark a repository you will store the entire result to the user's session(Use [ASP.NET](#) session).
- 5.(Bonus) - Add a Bookmark screen that will show all the bookmarked repositories.
- 6.When you finish – upload your project to GitHub
